

Metallix Floor™

The stained and/or polished concrete look that many customers want is now available, regardless of the quality of your concrete. Concrete patching, trenching, or construction transitions are no longer concerns when evaluating whether a concrete slab is a candidate for the polished or stained “look.”

GENERAL USES

- » Lobby & Foyer Areas
- » Corridors
- » High Visibility Areas
- » Retail Facilities
- » Hospital and Healthcare Facilities
- » Restaurants

DUREX
Since 1964

Eliminate “wear patterns” and/or concrete dusting; common problems with polished or stained concrete...Metallix Floor™ is not a stain or a dye, but instead a poured polymer topping.

Metallix Floor™ will remedy concrete inconsistencies while still offering the natural beauty of polished concrete.

The product is a seamless & decorative metallic poured flooring system that utilizes 100% solids technology to create an attractive alternative to stained and polished concrete.

Please check out the color options available on our website and don't hesitate to inquire about customized options for your upcoming project.

Metallix Floor™ incorporates a mixture of proprietary metallic aggregates and fluid applied resins to build a monolithic, durable, and chemical resistant seamless floor.
